

This Tip Sheet reflects code requirements of the 2015 International Residential Code (IRC) with Washington State Amendments.

Safety Glazing Markings:

Where safety glazing is required, each pane must be provided with a manufacturer’s label defining the type of glass and safety glazing standard to which it complies. The label must be permanently etched, fired, or embossed, on the glass or be a type that once applied cannot be removed without being destroyed.

Safety Glazing Required Locations:

1. **Glazing in Doors:** Safety glazing is required in fixed and operable panels of swinging, sliding, and bifold doors. Safety glazing is not required in a door if the glazed openings do not allow the passage of a 3 inch sphere, or the glazing in the door is decorative.
2. **Glazing Adjacent to Doors:** Glazing adjacent to doors is required in the following locations if the bottom edge of the glazing is less than 60 inches above the walking surface: Within 24 inches of either side of the door if glazing is in the same plane as the door, or if glazing is in a wall perpendicular to the door within 24 inches on the hinge side of an inswing door. Safety glazing is not required if there is an intervening wall or permanent barrier between the door and the glazing.

3. **Glazing in Windows:** Safety glazing in windows is required if the individual panel meets **all** of the following requirements:

- Exposed area of the individual panel is greater than 9 square feet.
- The bottom edge of the glazing is less than 18 inches from the floor.
- The top edge of the glazing is more than 36 inches above the floor.
- There is a walking surface within 36 inches, measured horizontally, from the glazing.

Exceptions:

- Decorative glazing.
- Where a horizontal rail capable of resisting 50 pounds per lineal foot of force without making contact with the glass is installed on the accessible side of the glazing 34-38 inches above the walking surface.

4. **Glazing in Railings and Guards:** All glazing in guards and railings, including structural baluster panels and nonstructural in-fill panels, is required to be safety glazing.

GENERAL INFORMATION:

- The intent of this Tip Sheet is to provide a general understanding of the code requirements and does not address the subject in great detail.
- Additional information can be obtained from your local [participating jurisdiction](#).

5. Glazing and Wet Surfaces: Glazing in walls, enclosures, or fences around showers, bathtubs, pools, hot tubs, spas, saunas, and steam rooms where the bottom edge of the glazing is less than 60 inches from the standing or walking surface is required to be safety glazing. Safety glazing is not required where the glazing is more than 60 inches, horizontally, from the edge of the water.

6. Glazing Adjacent to Bottom Stair Landings: Glazing adjacent to the landing at the bottom of a stairway where the glazing is less than 36 inches above the landing and within a 60 inch horizontal arc from the bottom tread must be safety glazing.

7. Glazing Adjacent to Stairs and Ramps: Glazing where the bottom edge is less than 36 inches above the plane of the adjacent walking surface of stairways, ramps, and landings between stair flights and ramp runs, must be safety glazing.

Exceptions:

- Where a horizontal rail capable of resisting 50 pounds per lineal foot of force without making contact with the glass is installed on the accessible side of the glazing 34-38 inches above the walking surface.
- Glazing more than 36 inches horizontally from the walking surface is not required to be safety glazing.
